

# Technical Data Sheet

## Q 30-770 Matting and Precleaning Gel

### Characteristics:

Matting and Precleaning Gel is a viscous, water-based matting agent that quickly and perfectly prepares surfaces for painting. The surfaces are completely evenly matted and at the same time removed from wax and silicone.

### Benefits:

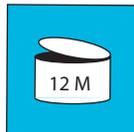

- the local pressure is distributed better, that means you can move forward faster.
- hard to reach places are easier to reach.
- prevents dust formation; it does not need a suction device.
- matts completely evenly, with no single scratches, and chemically works to remove wax and silicone for 100%.
- is also very good for removing any overspray from windows and mirrors.

### Application:

Put some 30-770 on a wet, not too coarse sanding fleece and work on it (matt). The surface is then rinsed with a wet sponge and, as usual, cleaned with silicone remover before it is painted.
